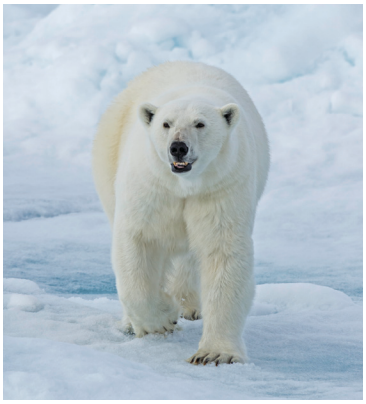
Answer Questions (Informational Text)

Directions: Roll small balls of modeling dough and place one on each answer circle. Read the text aloud and make observations about the images. Then, have children answer each question by squishing the corresponding dough ball with their finger.

A **habitat** is a place where an animal lives. The habitat must have the right kind of food, water, and shelter for the animal.

Polar bears live in an artic habitat. It is cold all year long. There is lots of ice and snow. Their thick fur keeps them warm.



Polar Bear

Sidewinder snakes are a type of snake that lives in the hot, dry desert. It has a special body that can move in the sand.

Sidewinder Snake

1. What is a habitat?

- their thick fur
- their sharp claws
- their big eyes

3. Where do sidewinder snakes live?

- in the rainforest
- in the artic
- in the desert

Look Out!

Watch for children that struggle to pull out information from the text. It can be helpful to set the story aside and talk together about things they already know about animal homes. Then, revisit the images on the page and reread the story. Discussing what they already know about a subject can prepare children to think critically about new information.
