Count, Create, and Represent Numbers 6–10

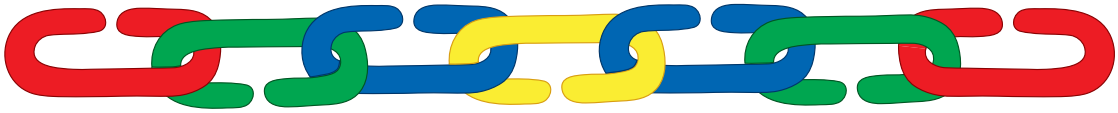
Directions: Cut out Number Cards 6–10. Have children identify the number and place UniLink® Cubes on each of the pictures, counting out loud as they set each cube down. Use modeling dough to mold the shape of the number directly on the card.

After working with your Number Cards, use Link 'N' Learn® Links and UniLink® Cubes to complete the problems below. Have children write or trace the number in the box.

I can make ☐ links.

I can make ☐ cubes.

I can make ☐ links.



Look Out!

One-to-one correspondence is an important early math skill that teaches children how each object represents its own unit. If children cannot create a group of a specific number, have them count forward from one and touch each item as they count.

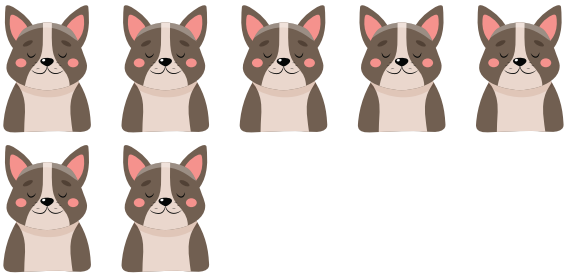
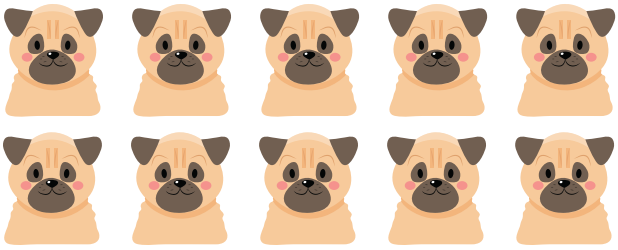
Count, Create, and Represent Numbers 6–10

Directions: Have children touch and count each group of objects at left below. Use Classifying Counters to represent each group. Then, ask children to draw a line to the matching number.





More Ideas

Make connections to the real world by finding groups of objects around the house. Ask children to touch and count groups of everyday objects, like the number of eggs left in the carton or the number of spoons in the drawer.
