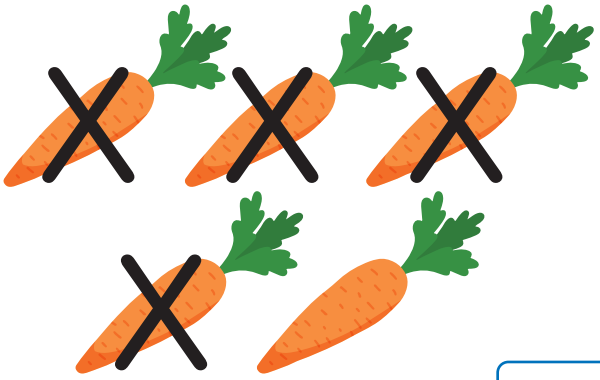
Separating Numbers Up to 10

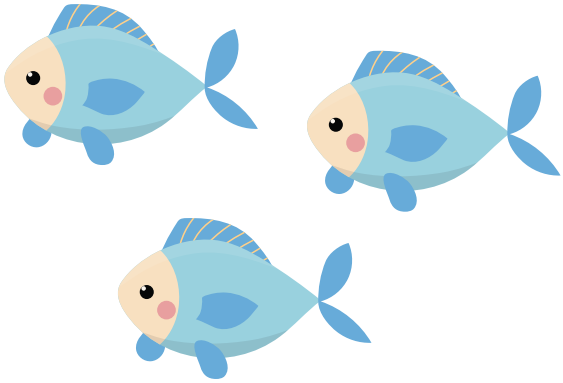
Directions: Use UniLink® Cubes to represent the problem. Ask children to cross out objects based on what they hear. Then, solve the problem and write or trace the answer in the box.

1. Sadie had 5 carrots. She ate 4 carrots. How many carrots does she have left?

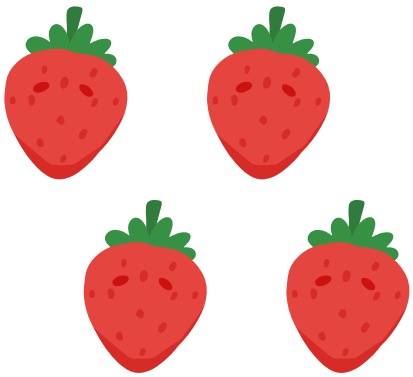


1

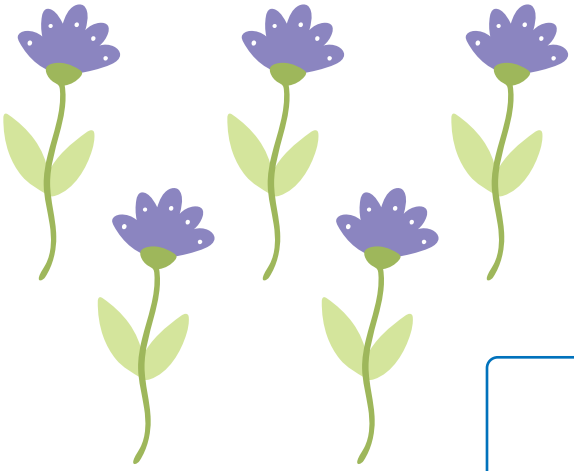
2. There are 3 fish. 2 fish swim away. How many fish are left?



3. Ali has 4 strawberries. He gives 2 to his friend. How many strawberries does Ali have left?



4. There are 5 flowers in the garden. Paisley picks 1 flower. How many are left?



Look Out!

Make sure children understand that the number of objects to cross out is the number of objects being "taken away." Use UniLink® Cubes to demonstrate the problem before deciding how many objects to cross out.

Separating Numbers Up to 10

Directions: Use Link 'N' Learn® Links to represent the problem. Have children write or trace to complete the number sentence and solve the problem.

1. Camden has a chain with 7 links. He gives 3 links to his partner. How many links does Camden have left?

_____ take away _____ is _____.

2. Mya has a chain with 8 links. She gives 4 links to her partner. How many links does Mya have left?

_____ take away _____ is _____.

3. 6 puppies are in a basket. 5 puppies climb out. How many puppies are left in the basket?

_____ take away _____ is _____.

4. Ruby finds 10 rocks at the park. She puts 7 rocks in her pocket. How many rocks are left at the park?

_____ take away _____ is _____.

More Ideas

There are many familiar children's songs that count down to reinforce how taking objects away makes a group smaller. Use your fingers while you sing "5 Little Monkeys Jumping on the Bed" or "5 Green Speckled Frogs" to reinforce how the total number of animals gets smaller when you take 1 away.
